PROJECTS

Student Result Management System

Jan 2025 – Mar 2025

Web Application

Tech Stack: Python, Flask, MySQL, HTML, CSS, JavaScript

- Developed a full-stack web application for managing student academic records, marks entry, and result generation.
- Implemented **role-based access control** — separate dashboards for Admin, Faculty, and Students.
- Built a dynamic result calculator that auto-computes grades and SGPA based on VTU grading scheme.
- Integrated **PDF export** feature allowing students to download their marksheets directly.

Personal Portfolio Website

Nov 2024

Static Website

Tech Stack: HTML5, CSS3, JavaScript

- Designed and built a responsive personal portfolio showcasing projects, skills, and contact information.
- Implemented smooth scroll animations, a sticky navigation bar, and a mobile-first layout without any CSS framework.
- Deployed on **GitHub Pages** with a custom domain configuration.

Library Management System

Aug 2024 – Oct 2024

Desktop Application

Tech Stack: Java (Core + OOP), MySQL, JDBC, Java Swing

- Built a desktop GUI application for managing book inventory, member registrations, and borrow/return tracking.
- Applied **OOP principles** (Inheritance, Encapsulation, Polymorphism) for modular and maintainable code design.
- Integrated MySQL via JDBC for persistent storage of books, members, and transaction history.

Weather App

Jun 2024

Frontend Mini Project

Tech Stack: HTML, CSS, JavaScript, OpenWeatherMap API

- Created a real-time weather application that fetches live data from OpenWeatherMap REST API using Fetch API.
- Displays temperature, humidity, wind speed, and weather condition icons dynamically based on user city input.
